Subject: Accelerating drawdown at Detroit

Please respond to my earlier email, today if possible. If we are to accelerate drawdown in an effort to bring the LRO into service by mid- to late October, the sooner the better. Also, the Corps has dominated expert panel discussions and document preparation. You bring unique and valuable skills to the expert panel process. We value and respect your input. Please feel free to provide your comments or new information to the process.

If you have determined to not respond to our questions, please at least tell us that. Thanks
